

# Farmers have rights too!

85% of total population of Malawi live in rural areas and contribute 80% to Malawi's food security.

Agriculture is the main livelihood of the majority of rural people estimated in 12-14 million people

Malawi has a rich diversity in plants; around 555 species are considered food.

Principal food crops in Malawi include: maize, rice, sorghum, cassava, potato, beans and bananas.

Local crop varieties of maize, sorghum and finger millet from farming communities have been lost

Smallholder farmers of Malawi should have the right:

- o to sell, use, sow, re-sow, exchange, share or sell his/her farm produce including seed of protected varieties;
- o to protect their traditional

knowledge, innovations and practices relevant to the conservation and use of plant genetic resources for food and agriculture;

- o to participate in decision-making and to benefit from the use of the use of their seeds/propagating material and traditional knowledge.

Farmers' rights are based on the recognition of past, present and future contributions of farmers to the conservation, improving and making available plant genetic resources for food and agriculture.

Farmers' rights are recognized in the International Treaty on Plant Genetic Resources for Food and Agriculture. However, Malawi is yet to recognize and support these customary rights which ensure seed security. Without seed security, there is no food security.
